

Eclipse By Example Roadmap

July 16, 2014

Innovative Solutions For Mission Critical Systems

Updates

We have created an organization on GitHub named hefdg for Huntsville Eclipse Framework Developers Group. You can find a link here:

<https://github.com/hefdg>

It is also linked from the primary website for the Huntsville EFD:

<http://hsveclipse.com/>

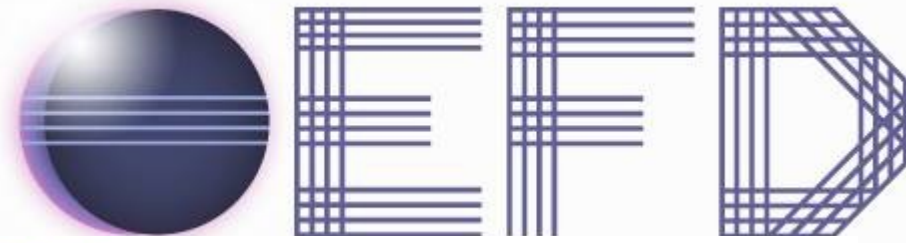

The presentations that we have covered so far this year are available in the presentations repository on the GitHub site.

More Updates

In June 2014, the Eclipse Foundation released its annual report. The report is available here:

http://www.eclipse.org/org/foundation/reports/annual_report.php

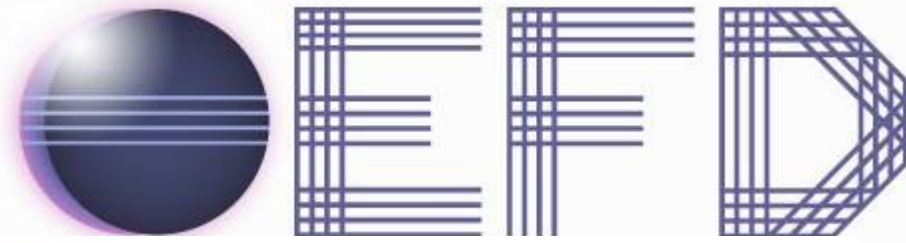

Also in June 2014, the Eclipse Foundation released Luna

Summary:

Starting in August, we will be presenting how to build an Eclipse RCP application from the ground up. We will walk through the material as quickly or as slowly as necessary to help you learn how to create, build and deploy an application of your own.

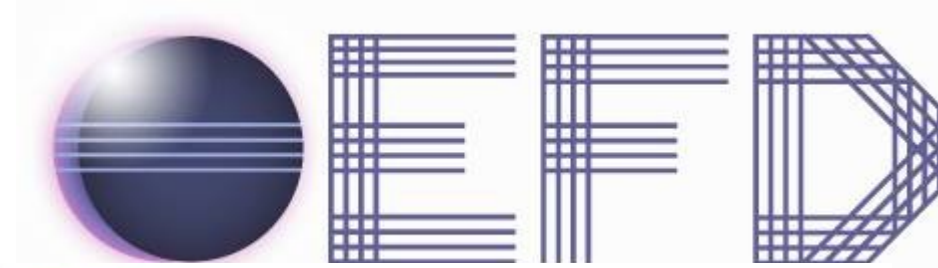

Today, we will start creating a roadmap for a suite of tools for photographers, from desktop management of their photo catalog to generating a website for their collection.

Summary:

Starting in August, we will be presenting how to build an Eclipse RCP application from the ground up. We will walk through the material as quickly or as slowly as necessary to help you learn how to create, build and deploy an application of your own.

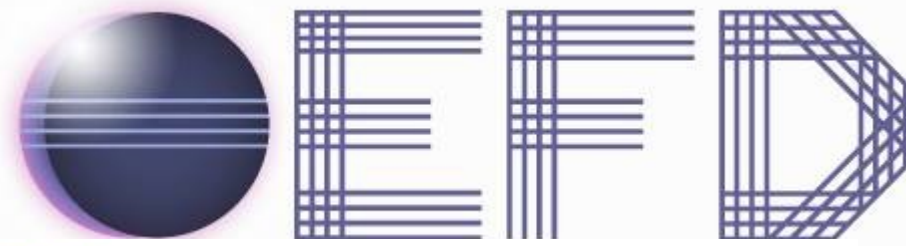

Today, we will start creating a roadmap for a suite of tools for photographers, from desktop management of their photo catalog to generating a website for their collection.

Roadmap:

Thoughts so far are listed here:

Group Participation Time!

What Eclipse projects are you interested in learning?

How can we fit them into an actual product to give examples?
